Comments	Sling load Drone Docking Station. Will do patrol ferry after the lift work ship share with the Helicopter request for patrol for 2 employees who need to do patrol.
----------	---

2023-10 FRESNO

The (503) Balch PH LZ has a shield wire hazard to the east approximately 550' away. The unmarked wires drop down from the north hillside and cross over the PH to the south tower just above the switchyard. This puts the wires approx. several hundred ft. in the air on the approach path to the LZ. The winds typically come up canyon from the west making the best approach from the east, through the unmarked wires. There is a Data plate developed for this LZ that mentions how to avoid the wires and make the approach into the LZ.
